Some dewormers claim just one dose of their product is the best way to deworm your horse, but that’s simply not true.

**Demand Safety:** You won’t find a laundry list of warnings and precautions on the PANACUR® (fenbendazole) POWERPAC label because fenbendazole has a gentle mode of action that makes it safe for horses of all ages, sizes, and body conditions.

**Demand Efficacy:** PANACUR® POWERPAC is the only dewormer FDA approved to treat ALL STAGES of the encysted small strongyle. Other dewormers miss a critical stage, ELy, which can account for up to 75% of the encysted small strongyle burden. Plus, it’s a great treatment option for treating ascarids—which are not just a problem in young horses!

So when it comes to which dewormer to trust, don’t forget there’s safety in numbers.

Consult your veterinarian for assistance in the diagnosis, treatment, and control of parasites. Do not use in horses intended for human consumption. When using PANACUR® (fenbendazole) Paste 10% concomitantly with trichlorfon, refer to the manufacturers labels for use and cautions for trichlorfon.
